

The Benefits of Directed Picking

A New Module for ACCU-DART for Sage 300 ERP Software

ACCU-DART has now gone paperless. We are pleased to offer a new module for Sage 300 ERP: Directed Picking.

Directed Picking allows the user to move efficiently through the warehouse picking items for an order. They no longer need to refer to a piece of paper to determine what item(s) to pick next.

Just scan or enter the sales order number and ACCU-DART will direct the user where to go in the warehouse, what item to pick as well as the quantity. This is now a standard module. ACCU-DART will direct the user either by the pick sequence in the Sage 300 ERP software, the pick order in Orchid Bin tracking, or by the oldest lot.

This will eliminate the need to have a picking slip and allow the user to scroll between what items need to be picked by using either the left or right arrow keys.

Save time and improve warehouse efficiency with the Directed Picking module for ACCU-DART.
