Serialized Inventory Made Easy
ACCU-DART Case Study

NSK America is a distributor of high speed milling and drilling spindles and hand tools in Illinois. Because each machine/tool required multiple specialized parts, each unit would not have just one serial number: some of the components inside the unit would also have a serial number. Therefore a complete unit may have it's own serial number and perhaps three components with their own serial numbers as well. This made it particularly difficult to track item information. NSK America was unable to meet their customers' need of getting a list of all component serial numbers with their orders.

NSK America contacted their Sage Pro ERP reseller – WAC Solution Partners Midwest, to find a solution to handle their unique inventory control requirements. They recommended ACCU-DART. WAC Solution Partners has worked with ACCU-DART many times in the past, and felt that it was a "well-priced, easy to use" system that is "great to work with".

ACCU-DART is a real-time inventory control solution, designed to integrate directly into your ERP system. Using radio-frequency scanner, ACCU-DART validates and updates item and serial information in real-time, ensuring that the correct serialized item is being processed at all times. ACCU-DART can also be customized to fit your unique needs.

ACCU-DART
INVENTORY MANAGEMENT SOLUTIONS

> "The ACCU-DART system is easy to use. Its flexibility allows us to capture master/component serial numbers and has virtually eliminated product shipping errors."
>
> *- NSK America*

WAC Solution Partners worked with ACCU-DART to create a custom solution for NSK America. In this case, instead of using the ERP system's serial number tables – WAC Solution Partners created a separate serial number table for both item and component serial numbers. ACCU-DART was customized to look at this separate table and validate/update the serial numbers in real-time; "in turn producing a part list with component and component serial numbers". By scanning one serial number, the component and component serial number information is automatically validated. Upon posting, all this information is updated in the ERP system (and separate table).

ACCU-DART "met and surpassed" all of NSK America's objectives. "We are now able to scan master serial numbers and collect component products. We can also scan master box and cartons instead of items. Serial numbers now appear on packing lists, invoices, and our custom database."

About WAC Solution Partners Midwest

WAC Solution Partners is a Sage Software Authorized Partner offering business technologies for mid-market companies in the manufacturing, distribution, service and non-profit industries. We are dedicated to serving the needs of small and mid-sized businesses across the U.S.
