Parallel Processing for Sage 300

Our new Parallel Processing feature allows Sage 300 clients with many users scanning simultaneously to process transactions faster. By using the CPU processors in parallel and a queue that accumulates transactions that need be processed, response to handheld will be quicker, leading to increased efficiency.

We are having great success with our current Beta Test sites, but are always looking for new companies to benefit from the fastest version of ACCU-DART.

Parallel Processing will soon be available in an upcoming general release.

If your ACCU-DART client has a number of concurrent users, and would benefit from faster performance, please contact us today for more information.

Event Reporter:

TPAC
We were happy to attend the TPAC conference, April 10-13, in Richmond BC. TPAC is a wonderful opportunity to touch base with many of our existing resellers, and introduce them to the latest developments in inventory management.

We look forward to what next year has in store!

Thank you to everyone who stopped by to say "hello" and learn more about how ACCU-DART can benefit both your and your clients' business!

Seeking Acumatica Cloud ERP Beta Sites

ACCU-DART is now available for Acumatica Cloud ERP. We are currently seeking Beta Sites to begin the next phase of testing and to prepare for general release.

Acumatica ERP delivers adaptable cloud and mobile technology with a unique all-¬inclusive user licensing model, enabling a complete, real time view of your business anytime, anywhere.

With ACCU-DART, Acumatica users will be able to validate and track inventory transactions in real-time directly into their unique, cloud-based system.

Contact us today for more information about becoming a beta site for our newest ACCU-DART solution!

Upcoming Events:

At ACCU-DART, we pride ourselves on our ability to help our resellers and their clients.

Case Study: Simplifying Physical Inventory to Save Time & Money

Seed-Co Zimbabwe is a producer/distributor of grain seed in Harare, Zimbabwe. With three 650,000 sq. ft. (60,000 sq. meters) warehouses, they have struggled with a long and cumbersome physical count process that resulted in wasted time, and inaccurate stock counts. By manually recording the physical inventory on-hand, users often recorded the wrong bin numbers or wrong stock codes. All this paperwork then had to be entered into the ERP system, where handwriting issues led to further mistakes being made. Overall too much time was being wasted manually entering inventory information into Sage 300 ERP, and too much time was being wasted reconciling the paperwork against the computer system.

Seed-Co contacted their Sage 300 ERP reseller - Microbiz Technologies - to help find a solution. That solution was ACCU-DART.

Learn how ACCU-DART helped Seed-Co improve their operations - read the case study here!

Privacy Statement:

We value the privacy of our resellers and their clients. We will never sell your information to any third-party.

Resellers have the option of being included on our "Find a Reseller" page - if you have opted in to this service, your reseller information is searchable on our page. But we do NOT provide a list of our resellers to any organization. Additionally, we do not maintain contact data for your clients.

If you have any questions about how we manage your information, please do not hesitate to contact us.
